Springfield Police Department — Incident Report 26-04187 (FICTIONAL TRAINING SAMPLE)

This is a fictional training document for AI demonstration purposes only. All names, addresses, and events are invented. Any resemblance to real persons or cases is coincidental.

Incident overview

On the evening of March 14, officers responded to a reported break-in at Hartwell Electronics, 412 Commerce Street. The rear service door showed pry damage near the latch. The interior stockroom was disturbed, with two shelving units emptied of high-value inventory: portable GPUs, laptops, and networking equipment with an estimated value of $48,200.

Scene observations

A shoe impression was recovered from dust near the rear entry, size estimated 10 to 11, with a distinctive hexagonal tread. A blue fiber sample was collected from the damaged door frame. The alarm panel showed a disarm event at 21:47 using a shared staff code that has been in circulation for over two years. Exterior camera coverage was obscured; the parking-lot camera captured a light-colored panel van at 21:32 with an obscured plate, dwell time 26 minutes.

Witness statements

A neighboring business owner, Dana Okafor, reported hearing metallic banging between 21:30 and 21:45 and observed a van matching the camera description parked against the loading dock. A former employee, interviewed as a routine contact, stated the staff disarm code was widely known and had been shared in a group chat. The store manager, Renee Calloway, provided an inventory export and noted the missing items were restocked only two days earlier, following a similar unsolved incident at the Fairview location last month.

Evidence log

Item E-1: shoe impression cast, rear stockroom. Item E-2: blue fiber sample, door frame. Item E-3: alarm panel event export. Item E-4: parking-lot camera footage, 21:00 to 22:30. Item E-5: inventory discrepancy report. All items logged under chain-of-custody procedure 7-B.

Open questions for follow-up

Whether the Fairview incident shares the same entry method and vehicle description; who had current knowledge of the restock schedule; whether the shared disarm code narrows the suspect pool or effectively widens it; and whether traffic cameras on Commerce Street captured the van's approach route.
